1 Week 1: Introduction to Statistics

Definitions

- **Population:** A group of objects or people with a shared characteristic.
- **Sample:** A subset of the population.
- **Parameter:** A numerical value that represent a characteristic of the population.
- **Statistic:** A numerical value that represent a characteristic of the sample.

Types of Variables

- **Qualitative:** Categorical data that can be divided into groups.
 - Nominal data: Data that cannot be ordered. (eye color)
 - Ordinal data: Data that can be ordered. (hurricane category)
- **Quantitative:** Numerical data that can be measured.
 - Continuous data: Data that can take any value within a range. (height)
 - Discrete data: Data that can only take specific values. (number of siblings)
